

Building Controls Cyber Risks

ESD is a leader in *Improving Society Through the Built Environment*. We create solutions that produce economic, environmental and experiential benefits for our clients, many of whom are the biggest names in the worlds of business, technology — and beyond. We emphasize innovation, adaptability and sustainability when providing mechanical, electrical, plumbing, fire protection, life safety and technology engineering. www.esdglobal.com

Coleman Wolf will participate in the webinar **Commercial and Corporate Real Estate Cyber Risk - Developing a Comprehensive Strategy**

Building control systems are increasingly coming under attack. Early attacks tended to be random and have relatively minor impact to operations, but in recent years the attacks have become increasingly organized and strategic in nature as criminals become more sophisticated in exploiting these systems. Now building control systems are at risk of being an attack vector for corporate networks, as slaves to botnet masters, to spy on confidential meetings, usurp control of systems, manipulate normal functions, and more.

ESD has a long history of providing building controls engineering and consulting services. As these systems continue to evolve and the threat landscape grows, ESD helps clients navigate this complex environment.
