

An AI-powered HVAC brain that makes buildings way more energy efficient

HOW IT WORKS

Autonomous AI technology for commercial HVAC. Made simple. Our AI works hard so your HVAC systems don't have to.

1. ANTICIPATE

Existing HVAC systems react to undesired events only after they happen.

2. REACT

BrainBox AI anticipates and foresees the undesired event (crossing the cooling setpoint) and acts preemptively to prevent it, ensuring maximum comfort while using minimal energy.

3. ADJUST

Every 5 minutes, the AI model recalculates the optimal configuration of all HVAC components and adjusts accordingly.

Making buildings smarter, greener, and more efficient.

BrainBox AI enhances your existing HVAC system with no expensive retrofitting or additional sensors required. Using artificial intelligence and proprietary algorithms, the solution autonomously drives your HVAC system by writing back to the controller in real time, saving you energy, money, and carbon emissions.

SET UP
RAPIDLY,
SAVE FOREVER
IN NO TIME

Carbon Footprint

-40%

Up to 40% reduction in carbon footprint

Energy Cost

-25%

Up to 25% reduction in total HVAC energy cost

Occupant Comfort

60%

Up to 60% improvement in set-point adherence

Equipment Life

50%

Up to 50% extension of equipment life
