## 40 Million Square Feet of Experience.

Built into our software, is hard data from our deep experience connecting, mapping and tagging SkySpark® sites. We use a range of data science techniques to efficiently determine which data points are valuable and how to accurately tag them.

## Intelligent Analytics.

Our analytics are informed by 30 years of energy engineering experience. With each deployment, they are continuously improved and tested, and have proven to save customers time in identifying issues and money in correcting them.

## Actionable Analytics. Finally.

As deployments grow, making sense of thousands of sparks is difficult. Through Key Performance Indicators, Dashboards, Deep Dive Reports and Progress Reports, we help you determine the most critical issues, track progress and communicate success.
