

Occupancy detection, true heatmap & door counting in one plug & play device

The Sensor Hub is a plug-and-play device that anonymously detects human presence, count and location while also precisely measuring scene and object temperatures. It enables any space to quickly and easily access improved visibility, safety, and control. The Sensor Hub leverages the native low resolution Calumino Thermal Sensor, and combines it with Calumino's powerful on-edge AI processing to extract valuable data.

Unprecedented Data

Calumino's on-edge AI delivers analytics data to your dashboard application in real-time.

- ✓ Security with real-time people detection (*never identification*)
- ✓ Hazardous hotspot detection
- ✓ True temperature mapping to optimize HVAC
- ✓ Future release will include tailgating, fall detection, and much more...
