CopperTree Analytics

MORE THAN YOU'D EXPECT FROM A SOFTWARE FIRM

At CopperTree Analytics, we have over 30 years of practical energy and building management expertise, allowing us to bring you a Software as a Service (SaaS) solution to help you improve operational efficiencies and start saving energy now.

Automated buildings generate enormous amounts of data, yet often-times that data isn't presented in a way that is meaningful to the people managing and optimizing those buildings.

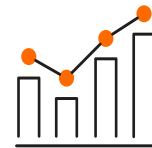

With our software, Kaizen, you get more than just data. Kaizen is a strategic and operational software analytics platform that continuously monitors your building systems based on customizable logic rules that alert you when system inefficiencies, equipment faults and operational issues are found.

By combining the money-saving features of fault Detection and Diagnostics (FDD) with the Energy Management Information System (EMIS), Kaizen is an ideal one-stop analytics product, suitable for both energy and maintenance programs.

Transform your building analytics into realistic actions

Continuously monitor your building data

Benefit from automated reporting and distribution

Save time and money with automated fault detection & diagnostics (FDD)

Achieve energy savings and measure performance
