ONVATION®

Your connected software solution
for **smart** restroom servicing

80%[*]
Up to 80% reduction in consumable waste

75%
Up to 75% reduction in complaints and work orders with Onvation®

90%
Saves over 90% time spent checking dispensers
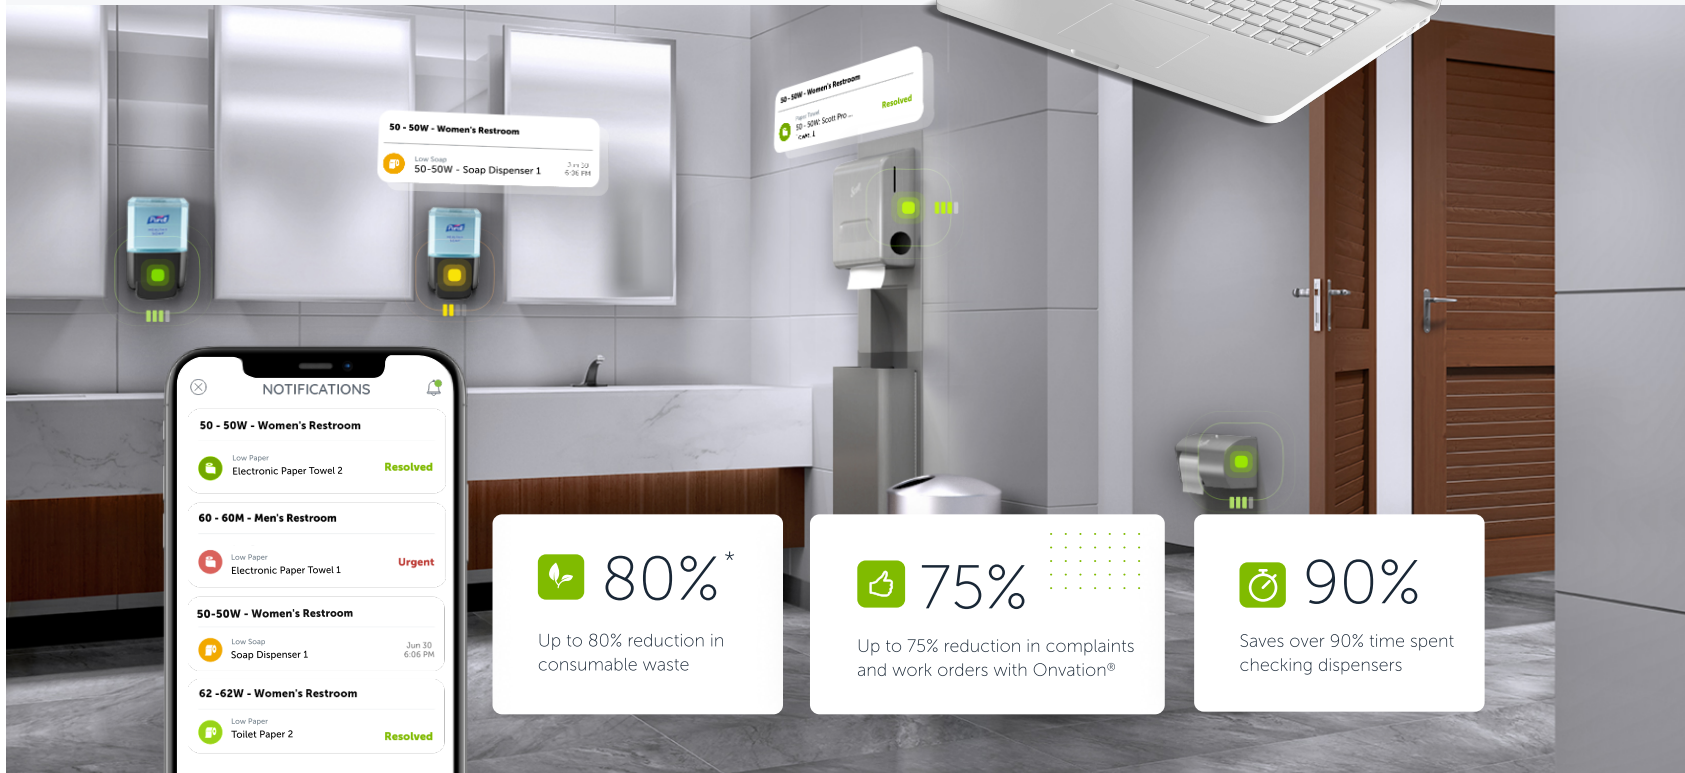

Looking to provide a superior experience to guests, increase productivity for cleaning staff, and better manage your bottom line?
Do it all with Onvation.

Restrooms are one of the most complained about areas in any building. Yet having janitorial staff constantly checking restroom conditions results in wasted time, wasted product, unproductive teams, and mismanaged spending.

Onvation enables facility managers to deploy cleaners when and where they are needed. It does this by integrating seamlessly with smart dispensers from Kimberly-Clark Professional and GOJO Industries to monitor restroom conditions in real-time. With the ongoing advancement of IoT solutions and the increasing demand for visible health and hygiene efforts, the time to optimize operations with smart restroom technology is now.

Tasks   Profile   Help   Settings

1. Collect

Smart dispensers, sensors, and fixtures collect real-time usage data and device status.

2. Connect

The local gateway collects the data and securely sends it to the Onvation cloud.

3. Analyze

Onvation receives, aggregates, and analyzes the data to deliver actionable insights.

4. Improve

Real-time notifications and advanced analytics predict and proactively improve operational efficiency.
