

AIRFLOW MANAGEMENT

KMCConquest™ Airflow Measurement System

It's time to rethink airflow management with the patent pending KMC Conquest Airflow Measurement System, a revolutionary approach to measuring outside airflow

The System can be applied to nearly any equipment, including **unit ventilators, packaged rooftops, complex built-up air handlers and custom-built equipment.**

The KMC ConquestAFMS is **not impacted by ambient air, wind gusts, low air velocities, airborne pollutants, turbulent airflow, duct bends, restrictions, or any of the other traditional pitfalls common to**

traditional airflow measurement technologies. The AFMS **programmatically characterizes system performance during commissioning** leveraging the **same methods as a TAB technician.**

The system **routinely monitors and reports performance** after commissioning. Native performance diagnostics **ensures accuracy of readings.**

The AFMS streamlines compliance with ASHRAE 36 guidelines for High Performing Buildings because it is based on ASHRAE standards 62.1, 111, and 189.1.

Maintains Performance in Inclement Weather

Works in Low Velocity & Turbulent Airflow Locations

Accurate & Reliable Airflow Measurements

Can Be Applied On Nearly Any Equipment Type
