OTI

BUILDING OPTIMIZATION FROM THE GROUND UP

While you look at your buildings from the top down focusing on occupancy rates, new investment opportunities and rising utility bills, we look from the groud up.

As IoT solutions and managed services providers we install, integrate, monitor and triage both IT and OT systems to identify opportunities for optimization within individual buildings and across entire portfolios.

Our IT and facilities capabilities include:

- Managed IT with secure, cutting-edge tools and personal support for any level of IT need.
- Managed OT with data-driven maintenance, performance monitoring and asset oversight through software, expert field technicians and an emphasis on network security.
- Managed IoT for a unified and cost-effective approach to IT, OT and high value energy assets.

Contact us to start an IT, OT or comprehensive building optimization project today
