

ABOUT SENSEWARE

Senseware is a full-stack solution of hardware, software and cloud data. Our out-of-the-box smart building solution offers building owners, operators, and facility managers a simple way to integrate, monitor and control building systems from Building Management Systems (BMS) to mechanical and environmental systems. The real-time data that Senseware provides, gives customers a comprehensive view of the building portfolio status anytime and anywhere. Senseware empowers customers to bridge the gap to solutions covering energy conservation, water conservation, indoor air quality monitoring, predictive maintenance, failure detection, and more.

HOW IT WORKS

APPLICATIONS

Data Collection

Senseware provides a cost-effective and secure wireless solution to get critical mechanical, electrical, plumbing and environmental data from your facility. Easy to install and can be deployed as a stand-alone solution.

Building Analytics

Senseware gives you the insights and alerts to increase operational visibility and proactively manage your facility. Identify opportunities for performance improvement, and easily share insights across teams and organizations.

Building Optimization

Senseware optimizes your facility management with real-time, remote controls of your critical systems. Increase operational efficiency by addressing the inevitable technological or functional obsolescence in your buildings using wireless retrofits.

SENSOR BRIDGES

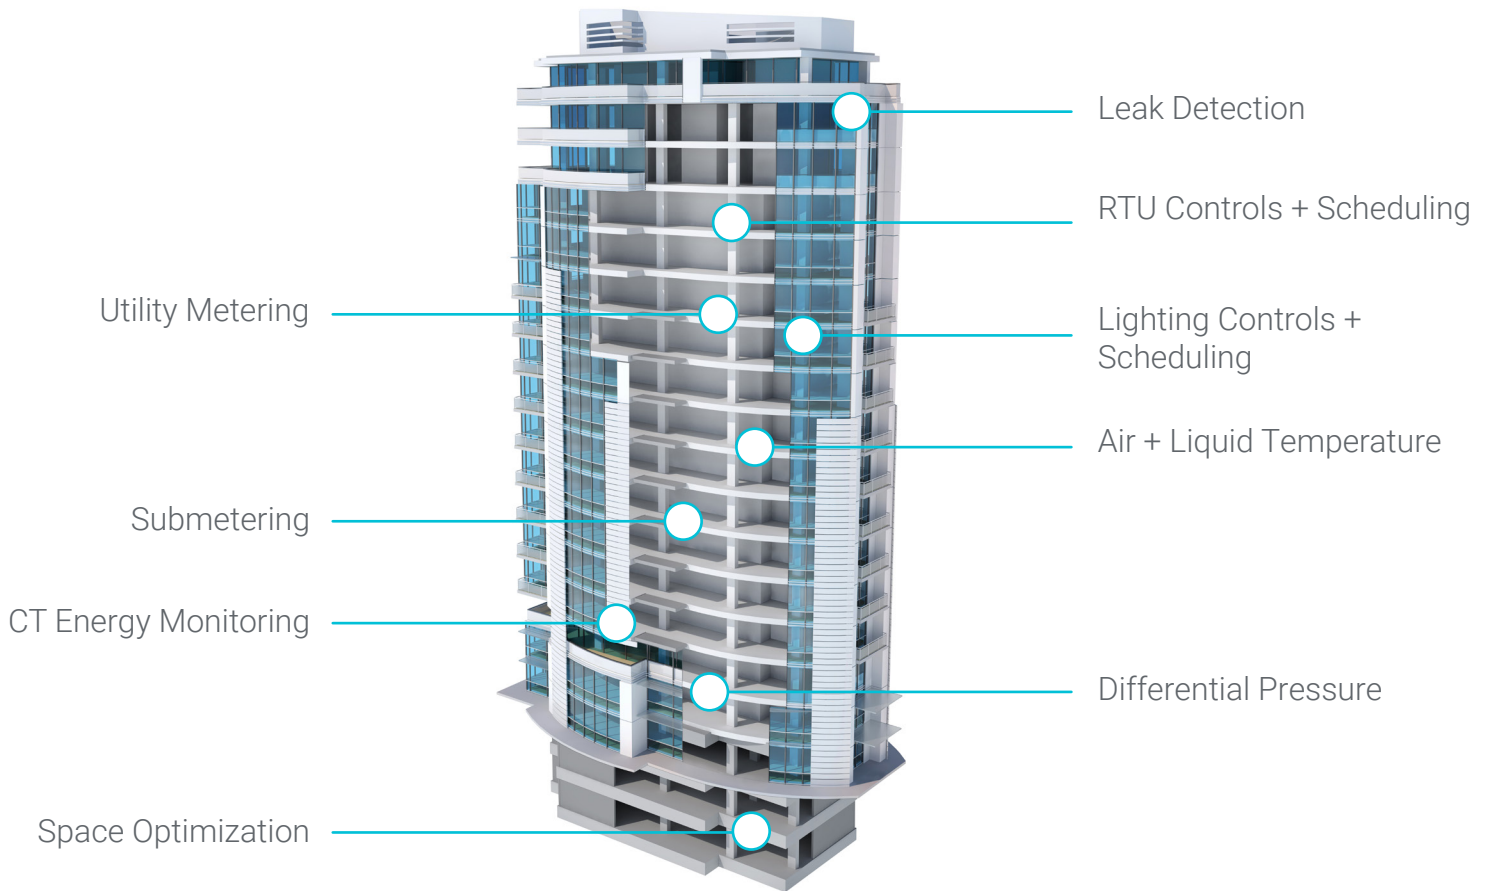

- Pulse
- Modbus
- BACnet
- 4-20mA
- Thermistor
- 0-5 Volt
- 0-10Volt
- Contact Closure

ENVIRONMENTAL SENSORS

- Light Exposure
- Motion/Occupancy
- Temperature + Humidity
- CO2 Level
- Volatile Organic Compound (VOC)
- Particulate Matter
